

Telegram

This notebook covers how to load data from Telegram into a format that can be ingested into LangChain.

```
from langchain.document_loaders import TelegramChatLoader
```

```
loader = TelegramChatLoader("example_data/telegram.json")
```

```
loader.load()
```

```
[Document(page_content="Henry on 2020-01-01T00:00:02: It's 2020...\n\nHenry on\n2020-01-01T00:00:04: Fireworks!\n\nGrace đỠđđ đỠ\x8d' on 2020-01-01T00:00:05:\nYou're a minute late!\n\n", lookup_str='', metadata={'source':\n'example_data/telegram.json'}, lookup_index=0)]
```
