

# Anthropic

This example goes over how to use LangChain to interact with Anthropic models

```
from langchain.llms import Anthropic
from langchain import PromptTemplate, LLMChain
```

```
template = """Question: {question}

Answer: Let's think step by step."""

prompt = PromptTemplate(template=template, input_variables=["question"])
```

```
llm = Anthropic()
```

```
llm_chain = LLMChain(prompt=prompt, llm=llm)
```

```
question = "What NFL team won the Super Bowl in the year Justin Beiber was born?"

llm_chain.run(question)
```

```
" Step 1: Justin Beiber was born on March 1, 1994\nStep 2: The NFL season ends with the Super Bowl in January/February\nStep 3: Therefore, the Super Bowl that occurred closest to Justin Beiber's birth would be Super Bowl XXIX in 1995\nStep 4: The San Francisco 49ers won Super Bowl XXIX in 1995\n\nTherefore, the answer is the San Francisco 49ers won the Super Bowl in the year Justin Beiber was born."
```
