

Blackboard

This covers how to load data from a Blackboard Learn instance.

```
from langchain.document_loaders import BlackboardLoader

loader = BlackboardLoader(

    blackboard_course_url="https://blackboard.example.com/webapps/blackboard/execute/announcement?method=search&context=course_entry&course_id=_123456_1",
    bbrouter="expires:12345...",
    load_all_recursively=True,
)
documents = loader.load()
```
