

Jina

Let's load the Jina Embedding class.

```
from langchain.embeddings import JinaEmbeddings
```

```
embeddings = JinaEmbeddings(jina_auth_token=jina_auth_token, model_name="ViT-B-32::openai")
```

```
text = "This is a test document."
```

```
query_result = embeddings.embed_query(text)
```

```
doc_result = embeddings.embed_documents([text])
```

In the above example, `ViT-B-32::openai`, OpenAI's pretrained `ViT-B-32` model is used. For a full list of models, see [here](#).
