

Personal Assistants

Conceptual Guide

We use “personal assistant” here in a very broad sense. Personal assistants have a few characteristics:

- They can interact with the outside world
- They have knowledge of your data
- They remember your interactions

Really all of the functionality in LangChain is relevant for building a personal assistant. Highlighting specific parts:

- [Agent Documentation](#) (for interacting with the outside world)
- [Index Documentation](#) (for giving them knowledge of your data)
- [Memory](#) (for helping them remember interactions)
