

s3 Directory

Contents

- Specifying a prefix

This covers how to load document objects from an s3 directory object.

```
from langchain.document_loaders import S3DirectoryLoader
```

```
#!pip install boto3
```

```
loader = S3DirectoryLoader("testing-hwc")
```

```
loader.load()
```

```
[Document(page_content='Lorem ipsum dolor sit amet.', lookup_str='', metadata={
'source':
'/var/folders/y6/8_bzdg295ld6s1_97_12m4lr0000gn/T/tmpaa9xl6ch/fake.docx'},
lookup_index=0)]
```

Specifying a prefix

You can also specify a prefix for more finegrained control over what files to load.

```
loader = S3DirectoryLoader("testing-hwc", prefix="fake")
```

```
loader.load()
```

[Skip to main content](#)

```
[Document(page_content='Lorem ipsum dolor sit amet.', lookup_str='', metadata={
'source':
'/var/folders/y6/8_bzdg295ld6s1_97_12m4lr0000gn/T/tmpujbkzf_1/fake.docx'},
lookup_index=0)]
```
